Role in Portfolio

- International Diversification - Exposure to Greater China markets.

Risk Factors

As with all mutual funds, the value of an investment in the Fund could decline, so you could lose money. International investing involves special risks, which include changes in currency rates, foreign taxation and differences in auditing standards and securities regulations, political uncertainty and greater volatility. The value of a debt security is affected by changes in interest rates and is subject to any credit risk of the issuer or guarantor of the security. These risks are even greater when investing in developing and emerging markets. The Fund is subject to greater impact from economic, financial, political, and other factors affecting China, Hong Kong, and Taiwan, than a fund that invests more broadly.

Performance

Performance (Average Annual Total Returns)			
	Third Quarter 2011	YTD	Since Inception (5/16/11)
RS Greater China Fund, Class A			
without sales charge	-27.27%	N/A	-28.80%
with sales charge (max 4.75%)	-30.74%	N/A	-32.19%
MSCI Golden Dragon Index¹	-21.79%	N/A	-22.86%

Performance returns for periods of less than one year are not annualized.

Performance quoted represents past performance and does not guarantee future results. Please note that the performance shown is since the Fund's inception on 5/16/11. Because the performance shown is for a short period of time, it is provided for informational purposes only and should not form the basis for an investment decision. Investment return and principal value will fluctuate, so shares, when redeemed, may be worth more or less than their original cost. The Fund's total gross/net annual operating expense ratio as of the most current prospectus for Class A shares is 1.96%/1.75%. The performance quoted "with maximum sales charge" reflects the current maximum sales charge of 4.75% that became effective on 5/1/11. Performance information current to the most recent month-end, which may be lower or higher than that cited, is available by contacting RS Investments at 800-766-3863 and is frequently updated on our Web site: www.RSinvestments.com.

Please read the prospectus carefully for more information on sales charges as they do not apply in all cases and if applied are reduced for larger purchases. Any sales charges are in addition to the Fund's fees and expenses as detailed in the Fund's most current prospectus. The net expense ratio reflects a written expense limitation agreement with RS Investments which will continue through 4/30/12. Fees and expenses are factored into the net asset value of your shares and any performance numbers we release. Total return figures reflect an expense limitation in effect during the periods shown; without such limitation, the performance shown would have been lower. Performance results assume the reinvestment of dividends and capital gains. The return figures shown do not reflect the deduction of taxes that a shareholder may pay on Fund distributions or the redemption of Fund shares.

Please note: High, double-digit and/or triple-digit returns are highly unusual and cannot be sustained. Investors should be aware that these returns were primarily achieved during favorable market conditions.

Returns represent those of Class A shares at net asset value, without the imposition of any sales charges but with dividends and capital gains reinvested from each time period. If sales charges were included, returns would be lower. Performance for other share classes will vary. This information is provided to assist you in assessing the risks of investing in the Fund and to demonstrate how the Fund's performance varies from year to year.

Geographic Allocation

1 The MSCI Golden Dragon Index (free float-adjusted market capitalization) represents the equity market performance in the China region. The Index is an unmanaged index that is not available for direct investment. There are no expenses associated with the index, but there are expenses associated with the Fund.

2 An expense limitation with respect to the Fund's Total Annual Fund Operating Expenses is imposed pursuant to a written agreement in effect through April 30, 2012, to limit the Fund's Total Annual Fund Operating Expenses to 1.96% for Class A shares, 2.73% for Class C shares, 2.38% for Class K shares, and 1.71% for Class Y shares.

3 Portfolio holdings are subject to change and should not be considered a recommendation to buy or sell individual securities.

4 The Fund's holdings are allocated to each sector based on their GICS classification. If a holdings is not classified by GICS, it is assigned a GICS designation by RS Investments. Cash includes short-term investments and net other assets and liabilities.

* Alpha (annualized) is a statistical measurement used to quantify the value added or subtracted by a portfolio manager. Specifically, alpha measures the portfolio's actual return against the portfolio's expected return given the risk of the portfolio as defined by its beta.

* Beta is a statistical measurement of a portfolio's relative sensitivity to the benchmark, which acts as a proxy for market risk. The beta between a portfolio and its benchmark is the amount of units the portfolio will move when the benchmark moves one unit.

* R² is a statistical measurement that shows the percentage of a portfolio's movements that can be explained by the movement in the benchmark. The numerical value of a portfolio's R² is always between 0 and 1. An R² of 1 (or 100%) means that there is perfect correlation in the movement between the portfolio and the benchmark.

* Information Ratio is a measure of the value added per unit of active risk by a manager over the benchmark. The Information Ratio is calculated by dividing the annualized excess return over a benchmark by the annualized standard deviation of excess return.

* Sharpe Ratio is a statistical measurement of the risk-adjusted performance of the portfolio. The ratio is calculated by dividing a portfolio's excess return over the risk-free rate (generally a 3-month T-bill) by the standard deviation of its excess returns. This approximates a portfolio's reward per unit of risk.
